leondong.com | github.com/LeonDong02 | yiming.dong@uwaterloo.ca

EDUCATION

University of Waterloo

Bachelor of Computer Science, Combinatorics and Optimization Minor, Distinction

Selected Coursework: Machine Learning, Computer Vision, Cryptography, Software Security, Game Theory

Sept. 2020 – Jun. 2025

Waterloo, ON

SKILLS

Languages: Python, Scala, C++ , Rust, Java, TypeScript, Swift, Obj-C, SQL

Technologies: Torch, NumPy, SciKit, Spark, Git, Mercurial

EXPERIENCE

Software Engineer II

Notion

Jun. 2026 – Present

New York, NY

Software Engineer

Meta

Aug. 2025 – May 2026

New York, NY

- Wrote a data pipeline to **extend a segmentation dataset** to include depth information and object segmentation
- Using the new dataset, performed **parameter sweep** to retrain a segmentation model to **improve IOU by 2%**
- Distilled a larger MLLM into a mood classification prediction head and exported to run on mobile devices
- Built the **autolabeling service** to label GenAI outputs (text, image, video) using LLMs on custom/integrity metrics
- Integrated autolabeling into an evaluation tool to **automate quality/safety assessment** for non-technical partners
- Scoped, designed, delivered, and maintained 3 new GenAI features on the Instagram platform for millions of users
- Shipped robust **server resolvers and handlers** that implement core feature functionalities, and rate limiting
- Hypothesized, executed, and performed multiple A/B tests seeing upwards of **10% increases in DAU**

Software Engineer Intern

Meta

Sept. 2024 – Dec. 2024

Menlo Park, CA

- Migrated the OCR text detector model to match train/evaluation metrics, benchmarking for on-device hardware
- Identified latency bottlenecks in our service and **reduced post-processing latency by 50%** through parallelization
- With additional latency budget, proposed LLM autocorrect solution. Explored thoroughly, carefully balancing network latency, server side latency against word error rate improvements. Ultimately shipped feature seeing a relative **15% decrease** in WER, utilizing optimizations through careful **payload encoding** and **kv-caching**

Software Engineer Intern

Databricks

May 2024 – Aug. 2024

San Francisco, CA

- Contributed across the stack and cross-teams to design, and build out multiple E2E account-related features
- Fleshed out new invite code functionalities including generation, provisioning, searching, and resetting within the accounts internal tool to streamline the private previewing SOP, reducing load on engineering teams
- Integrated both **Arkose** and **IPQS** into the sign in and sign up experiences to prevent abuse on Databricks
- Laid groundwork for new **E2E testing infrastructure** using **Kubernetes cron jobs** to monitor the health of CUIs

Software Engineer Intern

Intuit

Sept. 2023 – Dec. 2023

Toronto, ON

- Developing new iOS components in Intuit's server driven UI design system which serves all of Intuit's subsidiaries
- Introduced QoL changes through **package management**, fixing **test flakes**, and improving **code coverage**
- Collaborated closely with designers and other engineers on a variety of engineering and design problems

Software Engineer Intern

LinkedIn

May 2023 – Sept. 2023

Sunnyvale, CA

- Worked fullstack on the LinkedIn flagship iOS app and API using **Objective-C**, **Swift**, and **Java**
- Conceived and executed E2E on multiple new promotional projects, driving **tens of millions** of dollars in ARR
- Reached **millions** of users with a new premium redeem page and conducted A/B testing

Software Engineer Intern

Ecobee

Jan. 2022 – Apr. 2022

Toronto, ON

- Revamped the dynamic in-app thermostat installation guide using **SwiftUI** and **GraphQL** for **millions** of new users to streamline the onboarding process for new users and reduce the load on the customer support team

Software Engineer Intern

Facedrive Health

May 2021 – Aug. 2021

Toronto, ON

- Bootstrapped a mobile app in **SwiftUI** to be used in tandem with **thousands** of bluetooth wristband devices.
